All Tiller Arms are custom machined and are non-returnable - please measure carefully. Bores are machined to +/- .003 tolerance, so the use of a micrometer is highly recommended when measuring.

See current Edson price page for machining charges on special or square bores, keyways or setscrews.

**Company Name:**_________________  **Customer Name:**_______________

**Boat Type/Model:**_____________ **Length:**_____________ **Year:**_________

**Bore Size :_____ Specify: Key___ Through-Bolt____ Set Screws____**

**If key required, specify size:_____ Length of Arm:(10” or 15”)_**

---

**Sketch Location of Tiller Arm and Autopilot**

Mark the location of the keyway on the diagram below if it differs from the standard location*.
